cybernet inc

SOFTWARE OVERVIEW

SEPTEMBER 2007

CYBERNET SOFTWARES

- **1st generation software module**
  - H/W: JadeBT, JadeAD, JadeSTAR, JadeAIRE X1
  - S/W: CyberAPI

- **2nd generation software platform**
  - H/W: JadeEKO, JadeAIRE X2
 - S/W: CyberWorks

WHAT IS CYBERWORKS?

- CyberNet developed a compact and fast 'C' based software module, "CyberAPI", having multiple functions for easy application development

- CyberNet developed an advanced 'C' based software platform, "CyberWorks", featuring multiple functions of CyberAPI + multi application boot loader, file system, fire wall and remote downloader

- All items above are compatible with each other and conducive to make easier and more valuable user applications

- CyberNet plans to develop CyberDebug that can debug applications on PC without loading applications on the device

- CyberWorks contains all of software platform tools such as multi application boot loader, file system, debugger and CyberAPI

DEFINITIONS

- **CyberAPI**
  - 1st generation software module for CyberNet terminals
- **CyberWorks**
  - 2nd generation software platform for CyberNet terminals
- **CyberAPI**
  - CyberNet terminal Application Programming Interface
- **CyberEx**
  - CyberNet terminal operating engine
- **CyberCore**
  - CyberNet terminal multi application boot loader
- **CyberWall**
  - CyberNet terminal application fire wall and file system
- **CyberDebug**
  - CyberNet terminal application debugging tool
